

Low power compandor

SA576

DESCRIPTION

The SA576 is a unity gain level programmable compandor designed for low power applications. The SA576 is internally configured as an expander and a compressor to minimize external component count.

The SA576 can operate at 1.8V. During normal operations, the SA576 can operate from at least a 2V battery. If the battery voltage drops to 1.8V, this part will still continue to function, however, turning on the part at a V_{CC} of 1.8V requires two external resistors to bring V_{REF} to half V_{CC} . One resistor connects between V_{CC} and V_{REF} ; the other connects from V_{REF} to ground. A typical value for these external resistors is approximately 20k. A lower value can be used, but the power consumption will go up.

The SA576 is available in a 14-pin plastic DIP and SO packages.

FEATURES

- Operating voltage range: 1.8V to 7V
- Low power consumption
(1.4mA @ 3.6V)
- Over 80dB of dynamic range
- Wide input/output swing capability
(rail-to-rail)
- Low external component count
- ESD hardened

PIN CONFIGURATION

APPLICATIONS

- Cordless telephone
- Consumer audio
- Wireless microphones
- Modems
- Electric organs
- Hearing aids
- Automatic level control

V _O	Output swing low			0.2		V
	Output swing high			V _{CC} - 0.2		

NOTE:

- Operation down to $V_{CC} = 1.8\text{V}$ is possible, see description on front page of SA576 data sheet.
- Reference voltage, V_{REF} , is typically at $1/2 V_{CC}$.
